Technology health check

What is a technology health check?

Organizations want to be strategic in the way they adopt and deploy technology. But without a solid plan, it's easy to find yourself in a reactive cycle that prioritizes short-term needs over long-term business goals.

Our technology health check is a system audit, plus an IT roadmap for the future. You get a thorough overview of where the business is at today and a strategic technology plan to support future growth.

Optimization and transformation

The technology health check evaluates your current state and provides a multi-year roadmap for IT investment. Your organization will receive clarity around key priorities, high-value opportunities and implementation timelines.

Organizations that create and follow an IT roadmap gain advantages like these:

- A vision for IT investment
- Fewer unexpected IT expenses
- Insight into how technologies will affect each other, the budget and the workload
- Buy-in and commitment to strategic technology priorities

Solve for now, with a plan for next.

WIPFLI

Technology helps you lay the groundwork for long-term success

Put your technology under a microscope and magnify areas of opportunity. Our technology health check helps you gain new insights into what is possible, drives operational excellence and lays the groundwork for long-term success.

Organizational analysis

To understand where technology can add value, you should know where your business stands and what's truly possible across your organization. Each technology health check begins with a thorough situational assessment to identify opportunities for growth, efficiency and business transformation.

We take an in-depth look at your goals and business practices and then identify ways you could better use technology to meet your short- and long-term objectives.

Technology analysis

Our IT analysis identifies the vulnerabilities and inefficiencies that could affect your system's health. Our team will perform a complete assessment of your IT infrastructure, including hardware status, licenses, network performance, backup and recovery capabilities and cybersecurity.

Roadmap

Understand system lifecycle and scalability and plan for growth. Wipfli's IT roadmap provides a strategic plan to align technology with your business goals. Ensure you're making the right IT investments to solve today's challenges and position your organization for what comes next.
